Applicant: Lars Severinsson
Preliminary Amendment

3. (Currently Amended) A device according to claim 2, characterized in that the rotatable, first thrust ring (11) is biased by a compression spring (8) for keeping the balls (12) engaged with the oblique surfaces of the four rings (11, 13, 24, 25).
4. (Currently Amended) A device according to claim 3, characterized in that the axial force from the clutch discs (5, 6) is transmitted to and via the balls (12).
5. (Currently Amended) A device according to claim 1, characterized in that the balls (12) are arranged in a circumferential ball holder (12').
